

# T-3 EAVE HEAT PANEL

## T3 Eave Panel

The T3 is a single-panel system designed to be installed on the eave of the roof. When installed and energized, this system will prevent the accumulation of snow load and the formation of icicles and ice dams, reducing the risk of winter damage to your home. The T3 system is 18" wide and has an exposed, heated surface area of 16". Each system can be installed on new or existing roofs.
