

T-ZONE PANELS

T-Zone Eave Panel

The aluminum alloy panel surrounds the available heat source; the top, bottom and sides are in direct contact with the heat source at all times. This is the most efficient use of energy and offers the best results available. This system is an excellent choice for homes that are located in higher elevation, or for homes with eaves over 24" or for those who prefer the attractive look of the T-Zone System.
